

# Ahmed Yasser Shalaby - Portfolio Proof Sheet

Business Informatics student targeting Summer 2026 Data Engineering, Analytics Engineering, BI/Data, and Cloud/Security Automation internships.

**GitHub:** [github.com/HaloXD1](https://github.com/HaloXD1)   **Portfolio:** [haloxd1.github.io/ahmed-yasser-portfolio/](https://haloxd1.github.io/ahmed-yasser-portfolio/)   **Email:** [Ahmedy999.ay@gmail.com](mailto:Ahmedy999.ay@gmail.com)

## Strongest Proof

| Project                            | Problem                                                              | Proof                                                                                                                                                                    |
|------------------------------------|----------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Retail Data Pipeline</b>        | Messy retail exports need trusted KPIs.                              | Python/SQL ETL, YAML contracts, full/incremental SQLite loads, rejected rows, KPI exports, health checks, Streamlit, Docker, CI, dbt-style models, optional Airflow DAG. |
| <b>SaaS Analytics Pipeline</b>     | SaaS teams need reliable MRR, churn, adoption, and health metrics.   | DuckDB/Parquet layers, SQL marts, contracts, incremental loading, dashboard, Docker, CI.                                                                                 |
| <b>Cloud Security Auditor</b>      | Cloud teams need safer posture checks without real account exposure. | AWS-style snapshots, YAML policy rules, severity scoring, remediation reports, dashboard.                                                                                |
| <b>Outlook Calendar Automation</b> | Academic deadlines are spread across email and easy to miss.         | Outlook scanning, Google Calendar API, SQLite dedupe, dry-run mode, JSON audit logs.                                                                                     |

## Skills I Can Defend

Python data cleaning and automation; SQL joins, CTEs, windows, marts, and KPI validation; data contracts and rejected-row reporting; incremental/idempotent loading; Streamlit dashboards; GitHub Actions, pytest, Ruff, Docker; IAM-style checks, policy-as-code, and risk scoring.
